

E-Commerce Homepage Wireframe

Project Overview

This project focuses on redesigning an e-commerce homepage to improve product discovery and simplify navigation.

Problem

Users may struggle to find products quickly because the homepage contains too much information and lacks clear hierarchy.

This can lead to confusion and reduce engagement.

Goal

Create a simple homepage wireframe that helps users:

- Discover products faster
 - Navigate categories easily
 - Reach products with less effort
-

Key User Needs

- Search products quickly
 - Browse categories
 - View featured products
 - Access cart easily
-

Information Architecture

Homepage

- └ Header
- └ Hero Banner
- └ Categories
- └ Featured Products
- └ Benefits Section
- └ Newsletter
- └ Footer

Design Decisions

- Search bar placed in header for quick product discovery.
- Categories positioned near the top for easier navigation.
- Featured products highlighted to improve visibility.
- Clear CTA buttons added to guide users.

Wireframe

Learning

This exercise helped me understand homepage hierarchy, content prioritization, and how layout structure affects user navigation.
